

Hydrologic/Water Cycle

Water is essential to life. Without it, the biosphere that exists on the earth wouldn't be possible. Nicknamed the "water" planet, Earth is covered by one of our most precious resources. However, almost 93% is locked in the oceans, toxic to humans and many plants and animals. How do we obtain fresh water resources then? Where does drinkable water come from? To understand, we need to turn to the **Hydrologic Cycle**.
